

WHAT IS CLAIMED IS:

1 1. An isolated EER-7 protein having an amino acid sequence comprising at
2 least 10 contiguous amino acids from the sequence depicted in SEQ ID NO:2 or which has at
3 least 60% sequence similarity with SEQ ID NO:2, which EER-7 protein has (i) lysyl oxidase
4 activity; (ii) comprises four copies of a SRCR domain having a sequence greater than 80%
5 similar to a sequence selected from the group consisting of SEQ ID NOs: 3, 4, 5, and 6; and (iii)
6 comprises a conserved catalytic domain of lysyl oxidase enzymes having a sequence as depicted
7 in SEQ ID NO: 7.

1 2. The EER-7 protein of claim 1, wherein the protein has specific binding
2 activity with an anti-EER-7 antibody.

1 3. The EER-7 protein of claim 1 which is a human EER-7 protein.

1 4. The EER-7 protein of claim 3 which has an amino acid sequence as
2 depicted in SEQ ID NO: 2.

1 5. The EER-7 protein of claim 3 which is encoded by a nucleic acid having a
2 sequence as depicted in SEQ ID NO: 1.

1 6. The EER-7 protein of claim 1 having at least 60% sequence identity to
2 human EER-7 protein having an amino acid sequence as depicted in SEQ ID NO: 2.

1 7. A polypeptide fragment of an EER-7 protein, wherein the fragment has a
2 property selected from the group consisting of:

3 a) comprising from one to four copies of a SRCR domain having a sequence
4 greater than 80% similar to a sequence selected from the group consisting of SEQ ID Nos: 3, 4,
5 5, and 6;

6 b) a conserved catalytic domains of lysyl oxidase enzymes having a sequence
7 as depicted in SEQ ID NO: 7;

8 c) specific binding activity with an anti-EER-7 antibody; and

9 d) any combination thereof.

1 8. An isolated nucleic acid encoding the EER-7 protein of claim 1.

1 9. The nucleic acid of claim 8 which is a cDNA.

1 10. The nucleic acid of claim 8, wherein the EER-7 protein is a human EER-7
2 protein.

1 11. The EER-7 protein of claim 10 which has an amino acid sequence as
2 depicted in SEQ ID NO: 2.

1 12. The nucleic acid of claim 8 which comprises a nucleotide sequence as
2 depicted in SEQ ID NO:1.

1 13. A vector comprising a nucleic acid encoding a fragment of an EER-7
2 protein operatively associated with an expression control sequence, wherein the fragment has a
3 property selected from the group consisting of:

4 a) comprising from one to four copies of a SRCR domain having a sequence
5 greater than 80% similar to a sequence selected from the group consisting of SEQ ID Nos: 3, 4,
6 5, and 6;

7 b) a conserved catalytic domains of lysyl oxidase enzymes having a sequence
8 as depicted in SEQ ID NO: 7;

9 c) specific binding activity with an anti-EER-7 antibody; and

10 d) any combination thereof..

1 14. The vector according to claim 13, wherein the fragment of an EER-7
2 protein is a full length EER-7 protein.

1 15. A host cell transfected with the vector of claim 14.

1 16. A non-human animal transformed with the vector of claim 14, wherein the
2 animal expresses an EER-7 protein at a detectable level in response to estrogen.

1 17. A method for producing EER-7 protein, which method comprises isolating
2 EER-7 protein produced by the host cells of claim 15, wherein the host cells have been cultured
3 under conditions that provide for expression of the EER-7 protein by the vector.

1 18. An isolated nucleic acid of at least 20 bases that hybridizes under stringent
2 conditions with a nucleic acid having a nucleotide sequence as depicted in SEQ ID NO: 1.

1 19. The nucleic acid of claim 18, wherein at least ten nucleotides are
2 contiguous nucleotides from the nucleic acid sequence as depicted in SEQ ID NO: 1.

1 20. The nucleic acid of claim 18 which is detectably labeled.

1 21. An antibody that specifically binds to the EER-7 protein of claim 1.

1 22. A method for detecting an EER-7 protein, which method comprises
2 detecting binding of the antibody of claim 21 to a molecule in a sample suspected of containing
3 an EER-7 protein, wherein the antibody is contacted with the sample under conditions that
4 permit specific binding with any EER-7 protein present in the sample and binding of the antibody
5 to the molecule in the sample indicates the presence of EER-7.

1 23. A method for detecting expression of *EER-7*, which method comprises

2 detecting mRNA encoding *EER-7* in a sample from a cell suspected of expressing *EER-7*.

1 24. The method according to claim 23 wherein mRNA encoding *EER-7* is
2 detected by hybridization to an *EER-7*-specific nucleic acid.

1 25. The method according to claim 24 wherein the *EER-7*-specific nucleic
2 acid is at least 10 nucleotides in length and has a sequence identical to a sequence of the same
3 number of bases in SEQ ID NO: 1, or the complementary sequence thereof.

1 26. An assay system for identifying selective estrogen receptor ligands,
2 comprising transformed cells that express different functional estrogen receptors, wherein the
3 number of cells is sufficient to transcribe a detectable amount of mRNA encoding *EER-7*.

1 27. The assay system of claim 26, wherein the estrogen receptor is a human
2 estrogen receptor.

1 28. The assay system of claim 26 which is an endothelial cell.

1 29. The assay system of claim 28 which is a human umbilical vein cell.

1 30. A method for identifying a compound that selectively regulates *EER-7*
2 mRNA transcription through an estrogen receptor, which method comprises detecting a
3 difference in the level of *EER-7* mRNA in an assay system of claim 26 contacted with a test
4 compound, wherein a difference in the level of *EER-7* mRNA indicates that the test compound
5 selectively regulates the estrogen receptor.

1 31. The method according to claim 30, wherein the test compound is an
2 estrogen or an estrogen analog.

1 32. The method according to claim 31, wherein the test compound is an
2 estrogen receptor selective agonist or antagonist.

1 33. The method according to claim 30, wherein the level of mRNA decreases
2 when contacted with a test compound that regulates expression through the estrogen receptor.

1 34. The method according to claim 30, wherein the level of mRNA increases
2 when contacted with a test compound that regulates expression through the estrogen receptor.

1 35. The method according to claim 30, wherein the estrogen receptor is a
2 human estrogen receptor.

1 36. The method according to claim 30, wherein the first estrogen receptor is an
2 ER α .

1 37. The method according to claim 36, wherein the second estrogen receptor is
2 an ER β .

1 38. The method according to claim 30, wherein the cell is an endothelial cell.

1 39. The method according to claim 38, wherein the cell is a human umbilical
2 vein cell.

1 40. The polypeptide fragment of claim 7, wherein the four copies of SRCR
2 domains comprise the sequences as depicted in SEQ ID NOS: 3-6.

1 41. The polypeptide fragment of claim 7, having at least 46% sequence
2 similarity to the catalytic domain of lysyl oxidase enzyme having an amino acid sequence as
3 depicted as SEQ ID NO: 7.

1 42. The assay system of claim 26, wherein the transformed cells comprise two
2 different populations.

1 43. The assay system of claim 42, wherein one population expresses the ER α
2 estrogen receptor.

1 44. The assay system of claim 43, wherein the other population expresses the
2 ER β estrogen receptor.

1 45. A non-human EER-7 knockout animal, wherein endogenous EER-7
2 expression is suppressed in the animal.

1 46. A non-human animal transformed with a vector comprising a nucleic acid
2 encoding a protein that regulates EER-7 expression, wherein the protein is operatively associated
3 with an expression control sequence; wherein the animal expresses an EER-7 protein at a
4 detectable level in response to estrogen.
